

24v Thermostat Conversion Kit

Tap into the latest technology to manage and monitor your wine cellar environment with CellarCool.

Introducing our new 24-Volt Thermostat Conversion Kit for CellarCool split systems.

Utilize the industry leading technology from major manufacturers to monitor the environment of your cellar. (see individual thermostat manufactures features and benefits for details.)

Connect your thermostat to Wi-Fi to control the temperature from your phone, tablet or laptop. Monitor temperature and humidity through smart phones. Monitor run time and energy usage. Set alarm notifications
View your cellar conditions from your cellular device.

The use of the 24-volt thermostat conversion kit eliminates the thermostat normally included with the system and allows your contractor to select, purchase and install the thermostat technology of your choice, including but not limited to:

*Nest
Ecobee
Honeywell.*

Note:

Not utilizing the thermostat from CellarCool also eliminates the use of the bottle probe.

CellarCool does not provide SMART thermostats. Those must be purchased separately.

CellarCool customer service staff does not provide technical support for the customers selected thermostat.
